

Ad Campaign Performance Dashboard Report

Client: Panifica Româneasc – Intent 3D

Analyst: Doaa Mohamed Mahmoud

Delivery Date: 08 Nov 2025

Tool: Microsoft Excel Dashboard

Executive Summary

This report presents the performance analysis of localized ad campaigns and their impact on online order behavior across neighborhoods. The purpose is to provide actionable insights that help optimize ad spend, improve channel performance, and increase overall revenue. Results are presented as KPIs, visual analysis sections, key insights, and recommendations.

Data Preparation & Analysis Steps (Summary)

- Data Collection** – Received client dataset '01K8D8X8SBC059ZWKGD2DGQM61.xlsx'.
- Data Cleaning** – Removed duplicates, standardized date formats, corrected numeric types, and handled missing values.
- Data Transformation** – Created calculated fields: ROAS = Revenue / Ad Spend, Cancellation Rate = Cancelled / Total Bookings, Average Stylist Score.
- Exploratory Analysis** – Examined relationships across Neighborhood, Marketing Channel, Employee, Service Type, Time of Day.
- Visualization & Dashboarding** – Built Excel dashboard with KPI cards, charts, slicers, and summary tables for interactive analysis.

Key Performance Indicators (KPIs)

KPI	Value	Formula / Note
ROI	4.95	Revenue ÷ Ad Spend (rounded to 2 decimals)
Total Ad Spend	\$157,317.14	SUM(Ad Spend)
Total Conversions	9,806	SUM(Conversions)
Total Revenue	\$523,420.01	SUM(Revenue)
Average Stylist Score	—	AVERAGE(Stylist Score) (calculate from dataset)
Cancellation Rate	—	Cancelled Bookings ÷ Total Bookings (calculate from dataset)

Dashboard Analysis & Interpretation

Employee Performance: Top performing employees in revenue include *Robert, Michael, and Jennifer*. There is variance among employees which suggests differences in conversion efficiency and handling of leads.

Service Type Impact: Some service types generate higher revenue per booking. Prioritize marketing for high-yield services to maximize ROI.

Time of Day: Morning and Night sessions show highest revenue share. Shifting ad delivery and bids to those time windows can improve performance.

Client Type: Returning clients contribute the largest portion of revenue. Implementing or improving loyalty programs may increase repeat purchase behavior.

Marketing Channel: Google Ads and Facebook are the primary revenue drivers. Channels with lower contribution (Referral, Instagram) should be optimized or A/B tested.

Monthly Trend: Revenue trend is positive across observed months indicating campaign improvement and scale opportunity.

Recommendations

1. Reallocate budget incrementally to Google Ads and Facebook where ROAS is highest, while monitoring marginal ROI.
2. Launch targeted campaigns in top-performing neighborhoods and A/B test creatives in low-performing ones.
3. Implement a loyalty program and retention messaging for returning customers.
4. Schedule higher bids for Morning and Night time slots based on observed revenue patterns.
5. Provide training and best-practice sharing between top-performing employees and broader team.
6. Add neighborhood-level slicer in the dashboard for deeper hyper-local analysis.

Appendix & Data Notes

- Data Source: Client file '01K8D8X8SBC059ZWKGD2DGQM61.xlsx'.
- Timestamp: Report generated on 2025-11-06 18:52:14.
- Important formulas:
 - $ROAS = \frac{SUM(Revenue)}{SUM(Ad\ Spend)}$
 - $Conversion\ Rate = \frac{SUM(Conversions)}{SUM(Impressions)}$ (if Impressions column exists)
 - $Cancellation\ Rate = \frac{SUM(Cancelled)}{COUNT(Bookings)}$
- All monetary values are presented in the dataset currency. Numbers rounded to two decimals where applicable.
